

Leaders in Customer-Focused Sustainability.

At Carow, we take care of the environment—one bottle and one cap at a time. Our unique collection of packaging products adheres to the strictest environmental regulations.

We are always keeping up-to-date on the latest sustainable packaging innovations. From PCR-based glass to recyclable and eco-friendly materials, our products and processes are designed to help you meet your environmental goals while protecting people and the planet.

Socially-Responsible and Sustainability-Focused

We work with many B-Corps and other companies with sustainability pledges to support an inclusive, equitable and regenerative economy. We utilize environmentally responsible practices in many things we do, including the following.

- Offering no-polystyrene packaging shipping options
- Providing compliance documentation for our clients' eco-friendly certifications
- Manufacturing products at locations that have pledged water usage reduction and carbon reduction

Made in the USA

We're the only US-based manufacturer of EuroDrop® caps and inserts—the complete, all-in-one system for precise measuring and dispensing. With domestic shipping and local production, our EuroDrop line improves our clients' ESG scoring and aligns with their sustainability initiatives.

Recyclable Glass

Our glass bottles are made with post-consumer recycled (PCR) material, which is 100% recyclable without any quality degradation. Recycled glass also saves energy and reduces carbon emissions.

German-Engineered

German products are known as the most sustainable and ethically made products. Our German bottle suppliers are EcoVadis-certified, the most respected source for global sustainability ratings. Several of our German glass bottle options contain up to 70% recycled glass cullet.

Polypropylene

We offer mono-material pumps and screw caps made of polypropylene, an extremely adaptable material that can be recycled into many other products. Our polypropylene resin closure options are recognized and accepted by most residential recycling programs in the US. We offer PCR options for many of our closures.
